La Caonia e la valle del Drino

Prof. Roberto Perna

Posizione dell'Epiro e della Caonia nei Balcani sud-orientali

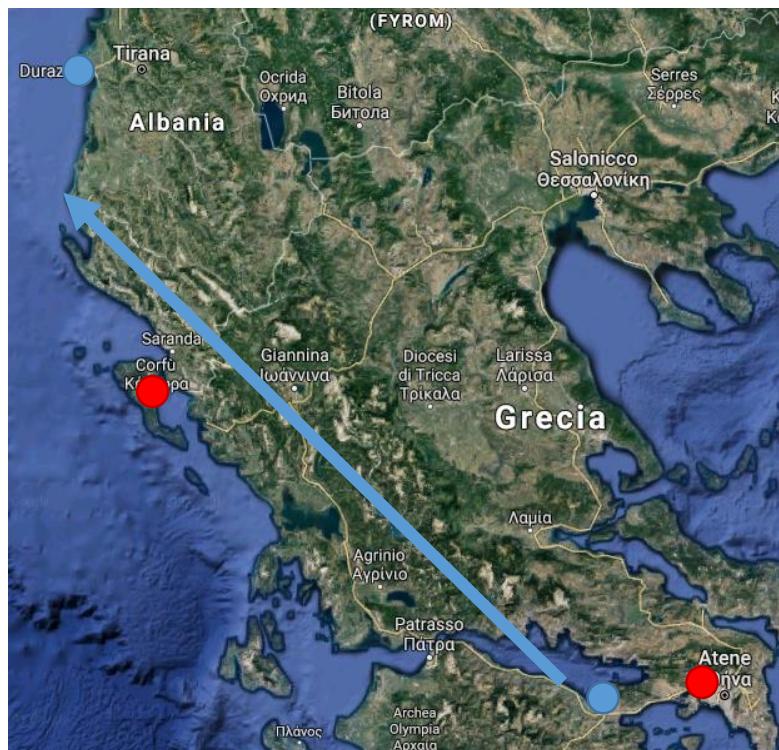

Albania centro-meridionale

THUC. II, 81: «I Greci avanzavano in ordine, con cautela, prima di trovare una posizione adatta a fermarsi; ma i Caoni, sicuri di sè e noti come i più coraggiosi tra i popoli di quella regione, senza aspettare di prendere posizione, si lanciarono con il resto dei barbari, pensando che conquistando la città (Stratos) con la forza, avrebbero goduto da soli della gloria dell'impresa».

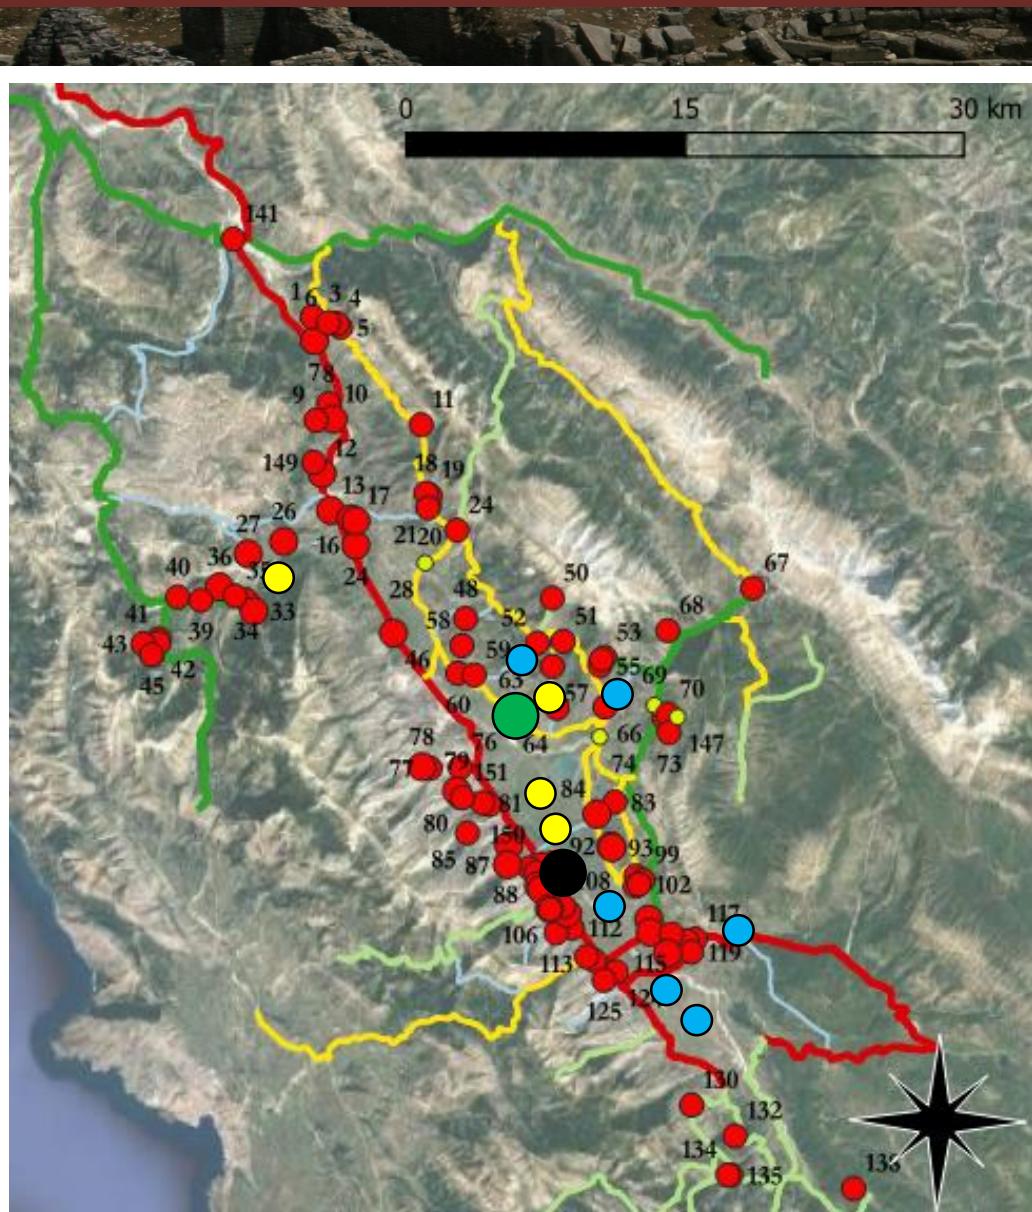

THUC. I, 26

435/4 a.C. Tucidide espone qui una delle cause scatenanti della Guerra del Peloponneso: la contesa tra Corcira ed Epidamno, che finirono per allearsi rispettivamente con Atene e Corinto. Il passo si riferisce in particolare alla richiesta di aiuto degli Epidamni (partito dei democratici) ai Corinzi, i quali accorrono per vie di terra

τριήρεις γὰρ εἴκοσι καὶ ἑκατὸν ύπηρχον αὐτοῖς ὅτε ἥρχοντο πολεμεῖν, πάντων οὖν τούτων ἐγκλήματα ἔχοντες οἱ Κορίνθιοι ἔπειμπον ἐξ τὴν Ἐπίδαμνον ἀσμενοι τὴν ὁφελίαν, οἰκήτορά τε τὸν βουλόμενον ιέναι κελεύοντες καὶ Ἀμπρακιωτῶν καὶ Λευκαδίων καὶ ἔαυτῶν φρουρούς. ἐπορεύθησαν δὲ πεζῇ ἐξ Ἀπολλωνίαν, Κορινθίων οὗσαν ἀποικίαν, δέει τῶν Κερκυραίων μὴ κωλύωνται ὑπ' αὐτῶν κατὰ θάλασσαν περαιούμενοι.

Bruciando dunque di risentimento per le suddette ragioni i Corinzi furono lieti di inviare il contingente di soccorso a Epidamno, incitando a recarvisi chiunque volesse, scortati da truppe di Ambracia, di Leucade e di Corinto Stessa. Questi andarono via terra fino ad Apollonia, colonia di Corinto, per timore che i Corciresi impedissero loro di compiere la traversata via mare

In the Roman time a substantial continuity of life of the settlements and a progressive occupation of the areas closest to the plain are attested.

Antigonea

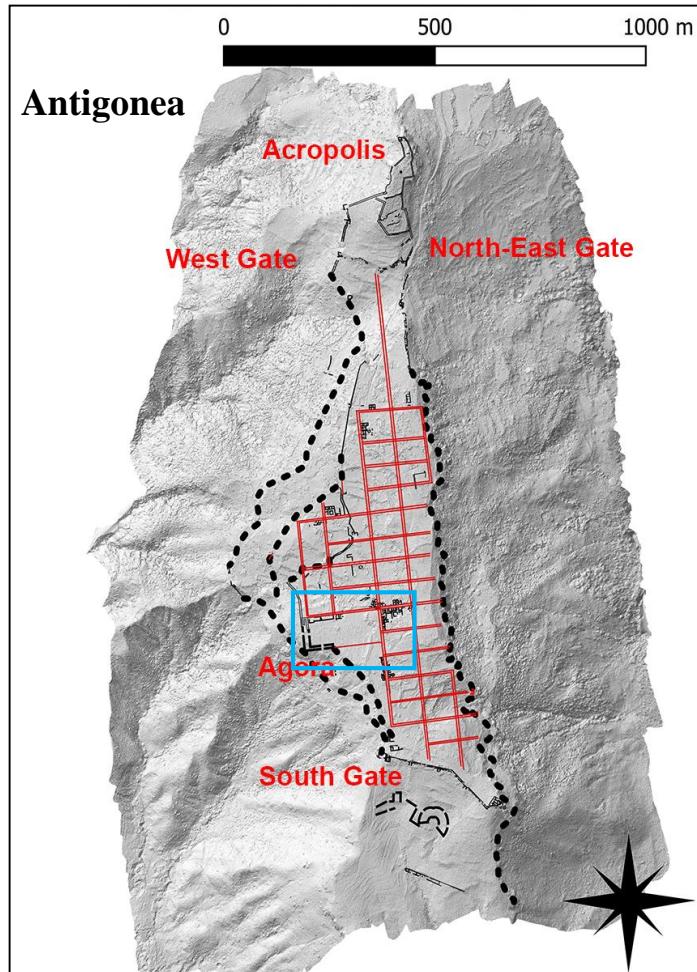

Sofratike (*Hadrianopolis*)

In order to detail the times and the ways in which the above processes were carried out, the research conducted in the two "hegemonic" sites Antigonea and Sofratike (Hadrianopolis) are fundamental.

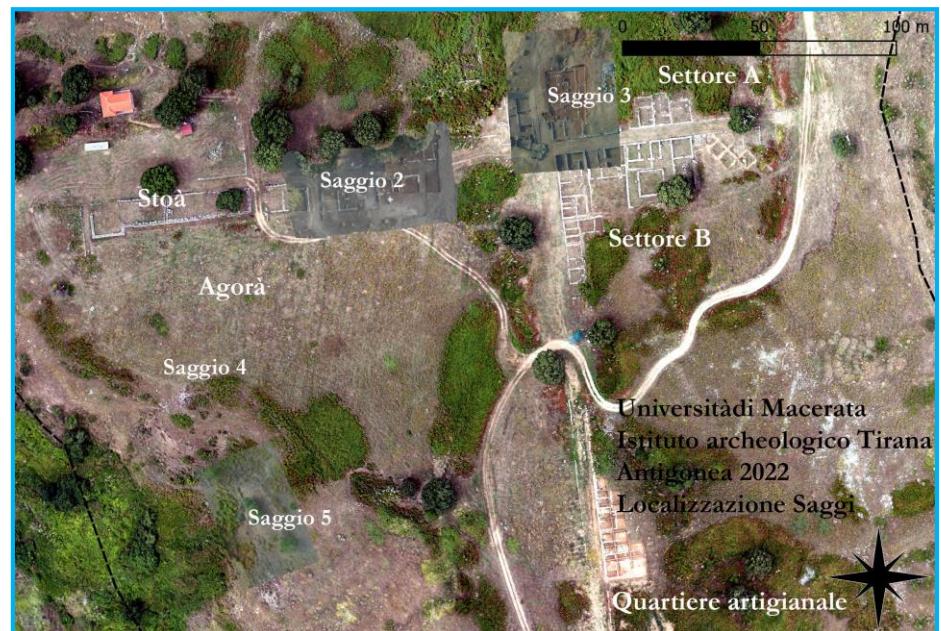

-  Sofratike (*Hadrianopolis*)
-  Antigonea

The excavations at Antigonea

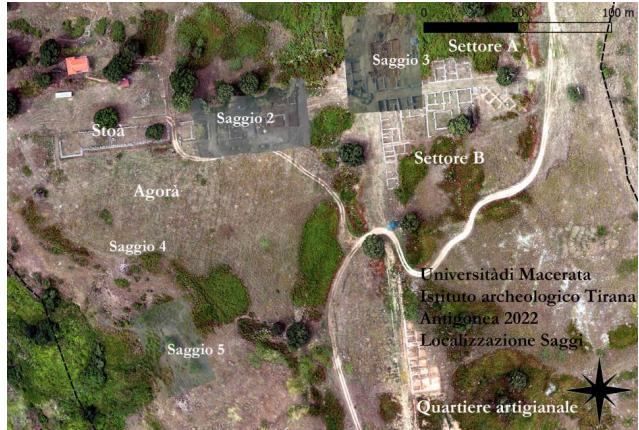

The excavations started in 2021 in Antigonea by the Archaeological Institute of Tirana and the University of Macerata have several objectives, including:

- define the planimetric characteristics of the urban center with particular reference to the agora and the B district.
- studying the life phases of the center focusing on relations with the transformations in the territory and with the development of Sofratike

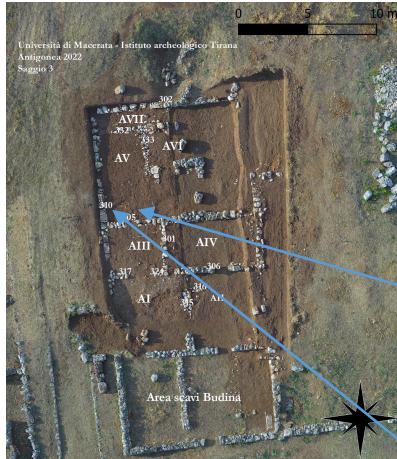

The excavations at Antigonea

Trench 3 was aimed at studying the Building of the House 4 (C4) partially investigated by D. Budina.

Although the excavation is still in an initial phase, it has allowed us to add some useful data for understanding the evolution of the city. It is emphasized:

- absence of significant levels linked to violent destruction to be connected to 168 a.C.
- Levels of use to be connected to the Roman and Byzantine periods.

In the Room A III, two quadrangular pits have been identified, 325 to E, and 326 to W.

They are linked together and connected to an intentional deposit of materials (UUSS 323 and 327)

The materials dating back to the Roman age document a significant presence in the area.

Sofratike. 3rd cent. bc. The continuity of settlement dynamics observed at sites in the territory, such as Kardiq, is also confirmed by Sofratike that shows a progressive structuring in a monumental sense. In this phase the emergence of the first regional productions documents the growth in importance also of the road network through which products from the Aegean area, first Corinthian and then Attic, were already arriving from the 4th and 3rd centuries B.C.

3th-2nd cent. BC. Production increases and diversifies, finding comparisons in several centers of Caonia including Butrinthe, Phoinike, Antigonea.

Between the 3rd and 2nd centuries, this settlement is also already somewhat structured economically and commercially and, perhaps as a service center for the nearby city of Antigonea, is at the centre of trade and exchange of regional productions. We do not have significant variations on the type of material we find compared to the previous period so we have black-glazed pottery productions of types attributable to regional productions, although in much larger quantities than in the previous phase,

Sigillata Italica

As part of this phenomenon, the structuring and the urbanization of the settlement at Sofratike begin. The Roman vicus of Sofratake will take the place of Antigonea and will be reorganized in the Hadrianic period with the name of Hadrianopolis

In the Augustan age the following are documented:

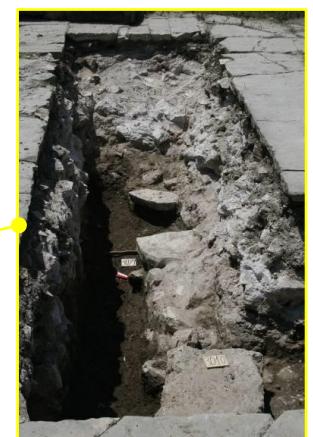

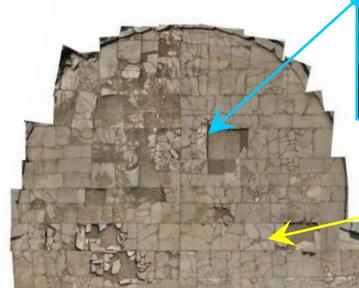

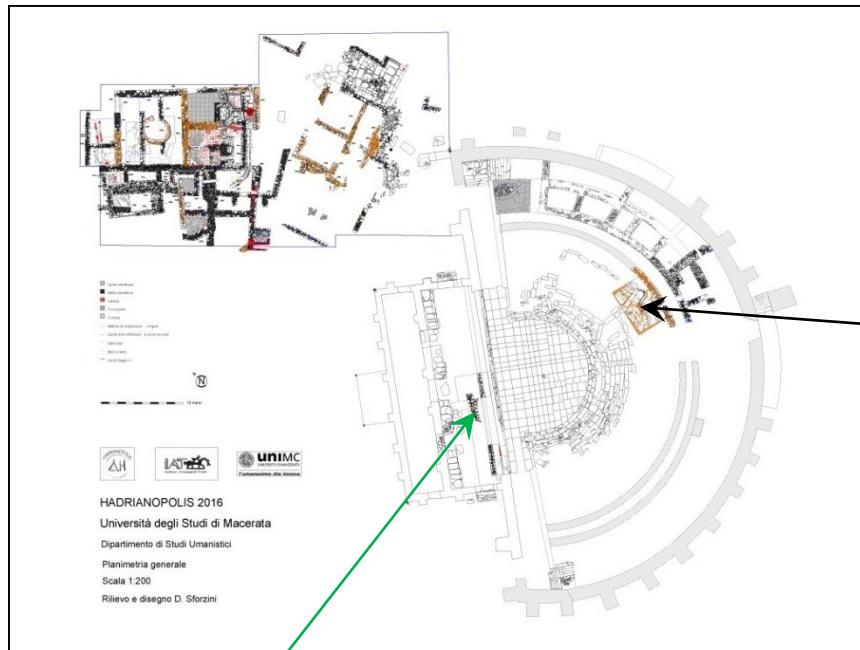

- fillings for leveling the area.
- Road organization.
- Levels of attendance.
- Presence of structures

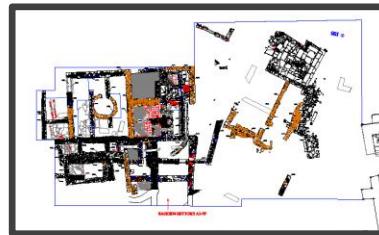

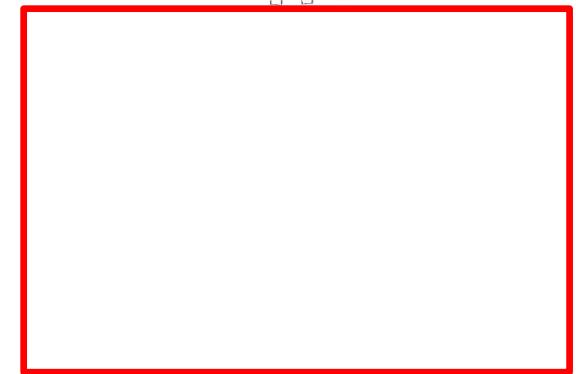

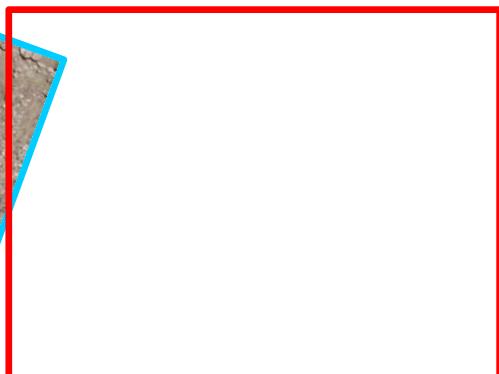

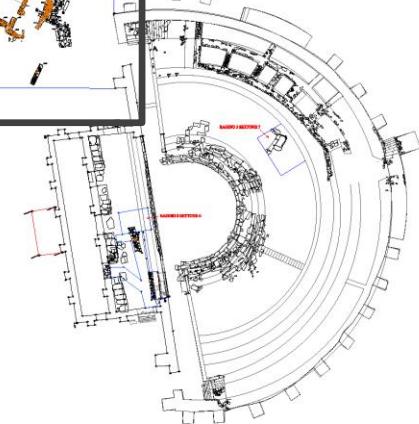

First half 1st cent. AD. Sofratike began to organize itself from an urban point of view. The materials denote at an early stage trade flows with Italy and in a still discontinuous manner with the eastern Mediterranean and North African

End of the 1st-2nd cent. AD. The relationships of our settlement changed somewhat. Relations with Italy seem to decrease to the point of disappearance while there is an increase in a probably more structured form of relations with the provincial area.
